

Atlas Change Quality Policy

Normative governance controls for 2026-Q3

Policy version	2026-Q3
Authority	Quality governance policy
Effective	2026-07-01

This policy defines mandatory approval, evidence, verification, and audit controls for Atlas changes.

Approval control

Every high-risk change requires two independent approvals before scheduling.
The requester cannot approve the same change.

Evidence retention

Change plans, approvals, execution logs, and verification results must be retained for 180 days after completion.

Verification

Post-change verification is required before a change can be marked successful.
A failed verification moves the change to FAILED and requires an incident reference.

Audit

Approval and promotion decisions are append-only. A later correction creates a new decision and never overwrites the original record.
